A longitudinal, multidisciplinary study of implementation of innovative improvement programs in older people care organisations.

Why study implementation?
- Implementation of new work practices is challenging.
- There is a large amount of evidence-based practices that are not provided for older people.
- The science related to implementing evidence-based practices with success and good outcomes for care recipients needs to be improved.

Examples of published studies

**Implementing a continuum of care model for older people—results from a Swedish case study**

**Fidelity and moderating factors in complex interventions: a case study of a continuum of care program for frail elderly people in health and social care**

**Design of a randomized controlled study of a multi-professional and multidimensional intervention targeting frail elderly people**
